

Complete the audit chain: upstream + downstream.

QorTrace scores on-chain PQC exposure across 18 chains with beautiful deterministic rigor. Enterprises still can't use it until someone cleans the upstream data mess. GRIDERA does that.

GRIDERA — UPSTREAM FILTRATION

Inventory · QRS · PQC Migrate (ML-KEM-768 / ML-DSA-65) · COMPLY (4 regions) · HCS audit trail

↓ clean, PQC-ready surface

QorTrace — DOWNSTREAM AUDIT

18-chain exposure scoring · Wallet/contract scan · QorBOM CBOM · Signed certificates

↓ signed CBOM + HCS receipts

ENTERPRISE COMPLIANCE OUTPUT

CycloneDX 1.6 · SPDX 3.0.1 · NIST FIPS 203/204/205 · regulator replay

- GRIDERA normalizes fragmented enterprise data so QorTrace scans a clean surface.
- We published our threat radar feed at q-grid.net/well-known/qortrace.json — ready to contribute.
- Every handoff is signed with ML-DSA-65 and anchored to Hedera HCS.

GRIDERA BRINGS

- 4-region PQC scanning + migration engine
- AI data-filtration agents for legacy schemas
- Multi-jurisdiction COMPLY mapping (EU/NA/IN/UAE)
- Cryptographically-verifiable HCS audit trail

QORTTRACE BRINGS

- 18-chain deterministic PQC scoring
- QorBOM CBOM (CycloneDX 1.6 / SPDX 3.0.1)
- White-label portal for audit firms
- Network peer threat-radar model

JOINT PILOT PROPOSAL

1. GRIDERA contributes PQC telemetry to QorTrace threat radar as a network peer.
2. Shared enterprise pilot: upstream inventory → QorTrace scan → QorBOM output.
3. HCS-anchored evidence pack for regulator replay.
4. Co-marketing: "From fragmented data to quantum-ready audit."
