

CONFIRMED ATTENDANCE
Blockchain Futurist 2026
Rebel Entertainment Complex, Toronto

TAURUS AI CORP. // GRIDERA

The Post-Quantum Identity & Audit Layer for Sovereign Capital.

Securing the multi-trillion dollar transition to agentic commerce
through NIST FIPS 204 PQC mandates and EU AI Act compliance.

PRESENTER

Effin Fernandez, Founder

Software is spending human money without a quantum-safe audit trail.

Agentic commerce is live. Yet, Ethereum, Solana, and legacy networks rely on classical ECDSA/Ed25519 signatures. As Shor's algorithm approaches, these are structurally compromised.

Simultaneously, the **EU AI Act** and **Pan-Canadian AI Strategy** mandate strict, checkable audit logs for AI decisions affecting capital. Legacy chains cannot provide this.

CRYPTOGRAPHIC DEBT

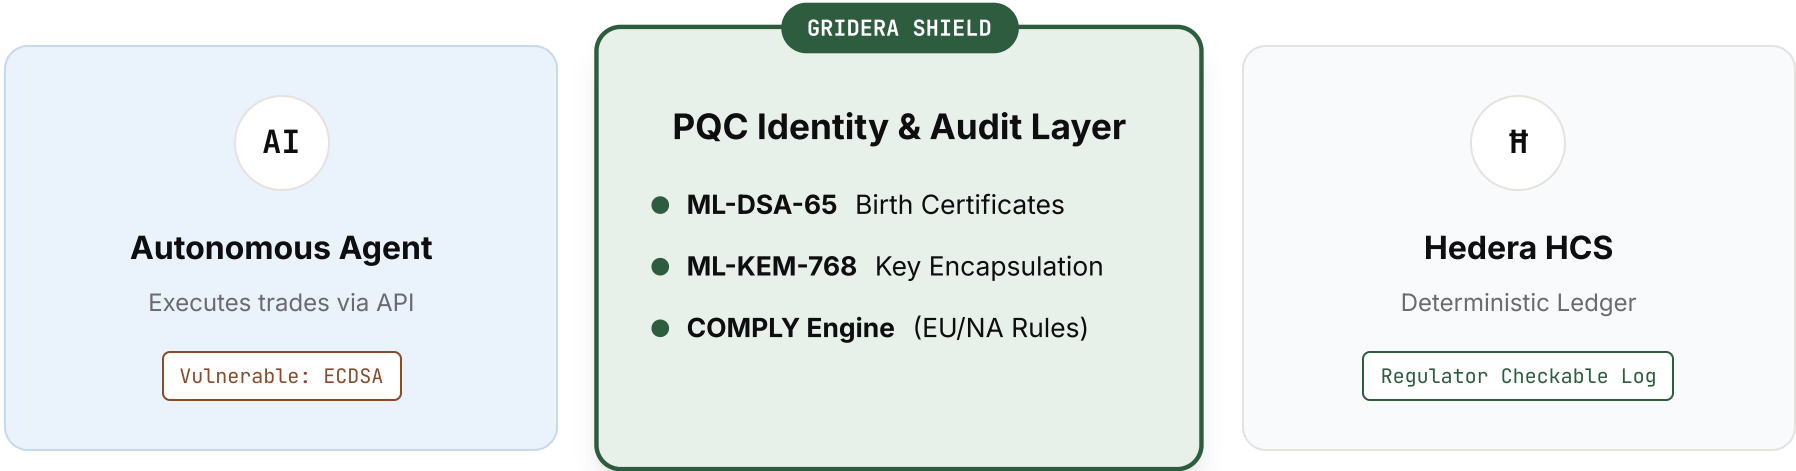

Classical Keys Fail

Existing agent wallets are fundamentally non-compliant with imminent NIST FIPS 203/204 mandates.

REGULATORY DEBT

EU AI Act Enforcement 2026

Unverifiable AI agent decisions face immediate commercial blockades without immutable provenance logs.

The First PQC Agent Birth Certificate Pilot.

Bridging the Pan-Canadian AI Strategy with verifiable agentic commerce. We propose a 4-week pilot to issue a NIST ML-DSA-65 identity directly to an x402-compliant agent wallet.

- 1

Integrate (x402 + Agnic.AI)

GRIDERA issues an ML-DSA-65 keypair and Hedera HCS birth-certificate to a demo agent operating through an x402 standard wallet.
- 2

Log (Hedera HCS Action Trail)

Every payment authorization and API call is signed and anchored to a dedicated Hedera HCS topic, producing a tamper-evident log.
- 3

Showcase (Agentic Day Stage)

Co-present a live "PQC agent payment receipt" at the Blockchain Futurist Conference—cryptographic proof of who paid and what was authorized.

VALUE CREATION FOR AGENTIC DAY

Concrete Institutional Trust

Moving the conversation from retail crypto to enterprise-grade Pan-Canadian AI infrastructure.

First-to-Market NIST Alignment

Demonstrates the only agent wallet structure capable of surviving FIPS 204 enforcement.

Investor Catalyst

Validates investor appetite for trust infrastructure (Evalyze / Vahid Fakhr alignment).

OBJECTION 01

"Why can't Ethereum just soft-fork to use PQC signatures?"

Signature Bloat. ML-DSA-65 signatures are ~2.4 KB, compared to 64 bytes for ECDSA.

Injecting 30x larger signatures into existing EVM state destroys transaction throughput (TPS) and triggers catastrophic chain bloat. Legacy chains require complete architectural rebuilds, not soft forks.

GRIDERA bypasses this by offloading signature verification to our local engine and dropping compact, deterministic roots into the Hedera HCS.

OBJECTION 02

"Isn't the quantum threat 10 years away?"

Harvest Now, Decrypt Later (HNDL). Sovereign state actors are scraping encrypted financial state today.

More importantly, compliance deadlines are immediate. NIST released FIPS 203, 204, and 205 in 2024. Enterprise and banking institutions are legally mandated to begin migrating infrastructure **today** to meet 2030 absolute cutoff dates.

OBJECTION 03

"What stops Hedera from building this PQC layer natively?"

They are a consensus layer, we are the compliance routing engine.

L1s provide the ledger. GRIDERA owns the proprietary integration IP that bridges local edge AI models (like Ollama/vLLM) and hardware security modules (HSMs) directly to those rails.

Our ultimate goal is to become the premier licensed enterprise gateway sitting on top of Hiero, validating the ecosystem, not competing with it.

OBJECTION 04

"You are a Solo Founder. Execution risk is too high."

Capital efficiency via Open Source leverage.

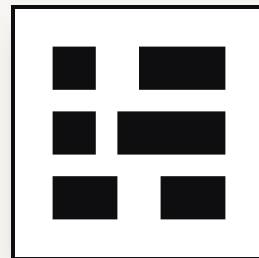

I am not reinventing L1 consensus. I am orchestrating the Linux Foundation Hiero standards and NIST FIPS 204 open primitives into a cohesive enterprise product.

We have live, ship-truth infrastructure today (q-grid.net/scan). Being lean allows us to bypass the governance gridlock that cripples 50-person L1 foundation teams.

TAURUS AI CORP.

Test Your Quantum Readiness.

GRIDERA is live across NA, EU, IN, and UAE. Scan to view the live
ML-DSA-65 audit trail architecture.

q-grid.net/scan

admin@taurusai.io

Ship-truth only.
